Heavy metals and POPs within the EMEP region 1999

1. Introduction

Heavy metals and persistent organic pollutants (POPs) were included in EMEP's monitoring program in 1999. However, already in 1995, co-operation concerning heavy metals and POPs between EMEP and other international programs was extended. This co-operation included the establishment of a database and collection of already available data on heavy metals and POPs among the participants. A number of countries have been reporting heavy metals and POPs within the EMEP area in connection with different national and international programmes such as HELCOM, AMAP, OSPARCOM, MEDPOP.

During the seventh phase of EMEP (EB.AIR/GE.1/1998/8) it is recommended that the future works under the Convention should concentrate on eight priority elements: lead (Pb), mercury (Hg), cadmium (Cd), chromium (Cr), nickel (Ni), zinc (Zn), copper (Cu) and arsenic (As). Particular attention should be paid to the first three elements.

The strategic long-term plans on POPs (EB.AIR/GE.1/1997/8) recommend to take a stepwise approach, and the following compounds or groups of compounds should be included in the first step: polycyclic aromatic hydrocarbons (PAHs), polychlorobiphenyls (PCBs), HCB, chlordane, lindane, alpha-HCH, DDT/DDE.

So far, five reports have been published (EMEP/CCC-Reports 8/96, 9/97, 7/98, 7/99, 2/00) which present data on heavy metals and POPs from national and international measurement programmes for the period 1987 to 1998. The majority of the data are included in the priority lists for heavy metals and POPs. In this report data from 1999 are presented.

2. Measurement programme

2.1 Monitoring sites

The location of the measurement sites with data reported to the database is given in Table 1 and Figure 1. However, only a few of the sites have reported data both for heavy metals and POPs. An overview of the sites for which CCC have received data for 1999 are given in Table 2–Table 5. The stations are generally located distant from local emission sources in order to be representative for a larger region.

Table 1: List of monitoring stations included in the heavy metal and POP data base.

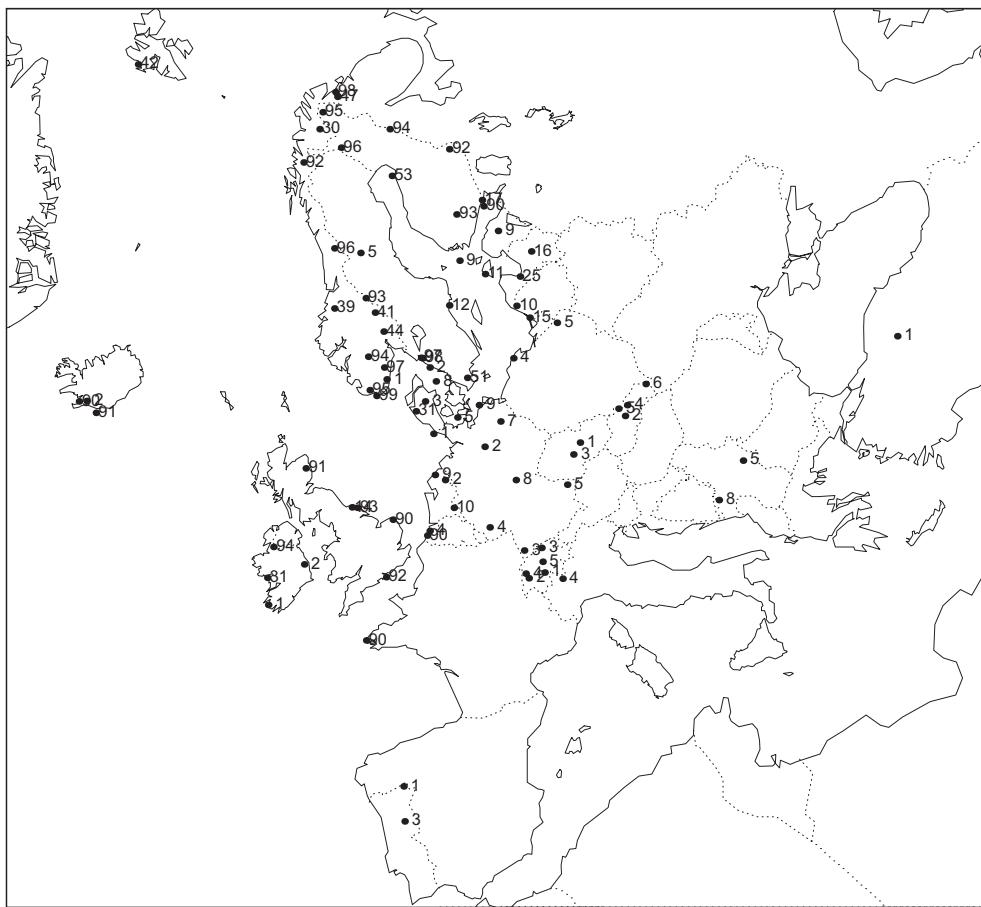

Figure 1: Location of monitoring stations which have reported data to the EMEP heavy metal and POP data base.

The site codes used in this report are the codes used for data submission and storage in the EMEP data base, or codes used in the OSPARCOM or HELCOM programmes. The codes consist of the two-letter ISO code for the countries, a four-digit number and a letter indicating the type of station, regional (R) or global (G).

2.2 Sampling and analytical techniques

A brief summary of the sampling and analytical techniques used for the 1999-data are given in Table 2–Table 5.

2.3 Quality of the monitoring data

In order to provide sufficiently accurate data for EMEP's needs, data with an expected lower accuracy have been flagged (QA) in the tables containing annual summaries and monthly means. The definitions of the quality flags are as follows:

1. High detection limit
 2. Site location not regionally representative
 3. Sampling problems
 4. Analytical problems
 5. Sample site located at high altitude

Table 2: General information about sampling and analysis of heavy metals in precipitation in 1999.

6. Concentration level low when compared to nearby stations
7. Extremely long sampling time
8. Sum of wet deposition + dry deposited particles onto the funnel. Unit: ng/m² day
9. Estimated values
10. Extremely high single sample concentrations

The data have been checked for outliers. Extremely high values, outside four times standard deviation in a lognormal distribution, have been flagged in the EMEP database and are excluded from this report.

The data forwarded to the CCC have come in a large variety of formats, and large resources at the CCC are still used to transform these data into a format suitable for the new data base (NASA/AMES 1001 transfer files). The CCC has made available a computer programme which transforms data from simple matrix formats, e.g. spread sheet formats, into NASA/AMES format. It is very important that each EMEP participating country gains experience with, and makes use of, the new format in order to release CCC resources for other important tasks.

2.3.1 Heavy metals

A few data with extremely high detection limits are not included in the report (Cd in precipitation from Portugal, Hg in precipitation from Ireland, As in precipitation (wet-only) from Belgium).

Information on the quality of the measurements is also available from the "EMEP Analytical intercomparison of heavy metals in precipitation – 1999" (Berg and Aas, 2000). A total of 17 laboratories participated. Two samples contained trace element concentrations (Pb, Cd, Cu, Ni, As, Co, Zn) typical of precipitation in Southern Scandinavia, and two samples contained higher concentrations typical of Central Europe.

The results in Table 6 show that half of the laboratories were outside 25% from the theoretical value for Cd in the low concentration samples. For the high concentration samples the corresponding result is about one third of the laboratories. For lead the results are better; about one third of the low concentration samples are outside 25% from the theoretical value, while only 2 of 17 laboratories had high-concentration results outside 25%. It should be emphasised that most laboratories involved measure mainly concentrations similar to the high concentration samples in their monitoring networks, and therefore have less experience than others with low concentration samples.

The last field intercomparison on heavy metals in precipitation was carried out in the framework of HELCOM-EMEP-PARCOM-AMAP activity during 1996. The exercise was divided in an analytical and a field intercomparison part and included seven heavy metals: Pb, Cd, Cu, Zn, As, Cr, and Ni. The field intercomparison part of the exercise was carried out at the German EMEP station Deuselbach (DE04). The results were extensively discussed at a workshop in Germany, September 1996, and the major conclusion from this meeting was that the agreement between the collectors regarding precipitation amount seems to be satisfactory, and that the outcome of this intercomparison is much more positive

than in the case of previous exercises. Furthermore, the results for Pb, Cd and eventually Zn seemed to be acceptable, but problems still remain to be solved for the other heavy metals considered (WMO, 1997).

Table 6: Percentage deviation from theoretical concentration values (extract from Berg and Aas, 2000).

Element	No. of laboratories	Lab. Identification
Cd (low)		
0-10%	2	5, 7
10-25%	6	4, 9, 11, 12, 13, 14
>25%	8	1, 2, 6, 8, 10, 15, 16, 17
Cd (high)		
0-10%	11	1, 2, 4, 5, 7, 9, 11, 12, 13, 14, 15
10-25%	1	17
>25%	5	6, 8, 10, 16, 17
Pb (low)		
0-10%	8	1, 5, 8, 9, 11, 13, 14, 15
10-25%	3	7, 10, 16
>25%	5	2, 4, 6, 12, 17
Pb (high)		
0-10%	10	1, 3, 4, 5, 7, 9, 11, 13, 14, 15
10-25%	5	6, 8, 12, 16, 17
>25%	2	2, 10

The geographical gradients for Pb, Cd and Hg in precipitation and air for 1999 seem to be reasonable. Pb in aerosols and precipitation (wet-only sampler) have concentration maxima for BE4 (Knokke). There are, however, also a data set from a bulk sampler for the same station which shows considerably lower concentrations for Pb (a factor of ten). For zinc the concentrations are highest for the bulk sampler. This may be due to inrepresentative site location for the samplers, sampling or analytical problems. The Belgian laboratory did not participate in the 1999-intercomparison. Estonian sites have lower concentration values for Pb in precipitation than the adjacent sites in Southern Finland, which seems strange. A similar pattern was also observed in 1997 and 1998. For Pb, the Estonian laboratory (2) reported results in the intercomparison between 30 and 60% from the theoretical value. Portuguese Pb concentrations are low – so they should be. The concentrations of Hg in air at NO42 are probably 20% higher than they are supposed to be, which is due to sampling problems.

2.3.2 POPs

It is generally difficult to give full credit to the information content in the POP data. Different sampling and analysis techniques make it difficult to compare data. For example, the Icelandic station has generally lower concentrations than the high Arctic NO0042G, which is reasonable, considering the geographical location in relation to known source areas, but the differences are also due to different data handling and analysis techniques. Iceland subtracts blanks, whereas Norway does

not. A few data with extremely high detection limits are not included in the report (Precipitation data from Ireland and Belgium).

We will have more knowledge on the quality of the data when the analytical intercomparison on POPs, carried out in the framework of EMEP, is finished early 2002. Preliminary results from Round 1 (analysis of standards) were promising, showing that most laboratories are able to analyse standards within $\pm 30\%$. Figure 2 and Figure 3 show the results for benzo(a)pyrene and PCB28. In the next step of the intercomparison, real samples will be analysed.

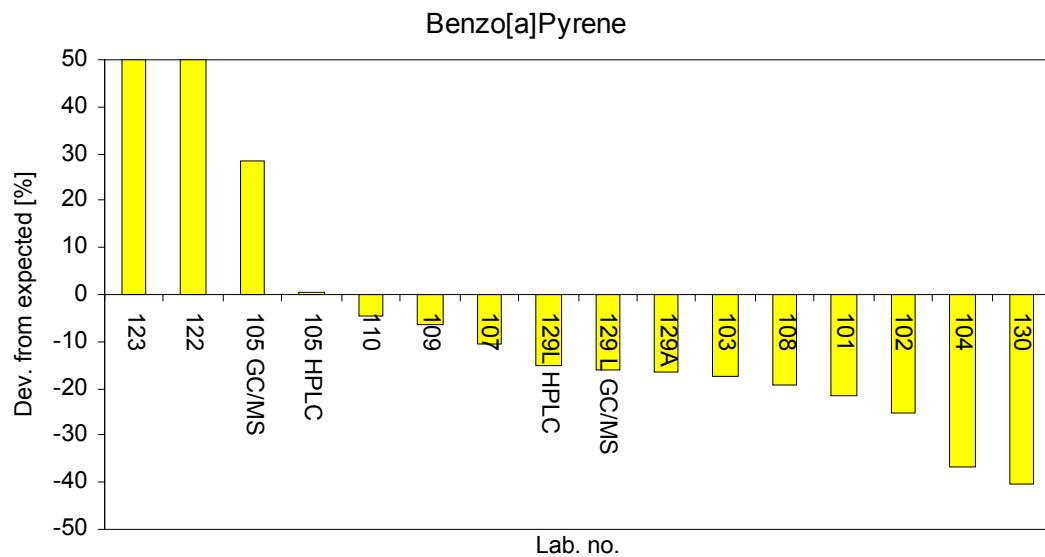

Figure 2: EMEP, analytical intercomparison on POPs measurements:
Preliminary results for benzo(a)pyrene.

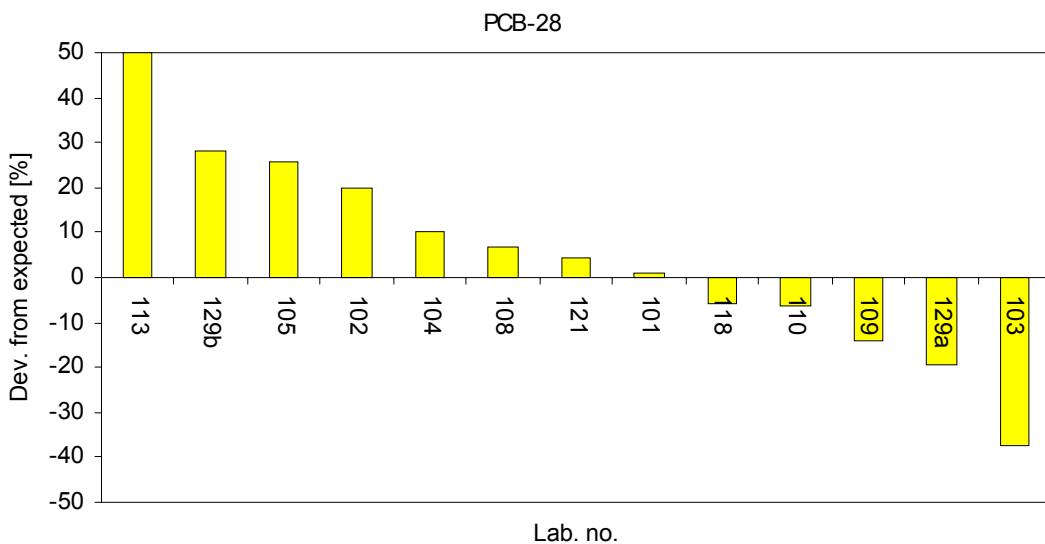

Figure 3: EMEP, analytical intercomparison on POP measurements:
Preliminary results for PCB-28.

3. Presentation of the measurement data

3.1 Maps of heavy metal concentrations over Europe

Annual averages of Pb and Cd from the 1999 precipitation and air data are presented in maps (Figure 4–Figure 7). The yearly precipitation mean concentrations have been calculated from daily, weekly or monthly reported values as precipitation-weighted averages. Average air concentrations are arithmetic averages of the reported values.

It should be noticed that only a few countries in Southern and Eastern Europe have reported data for heavy metals in precipitation. With the exception of the Baltic States, Czech Republic and Slovakia, there are no aerosol data reported from Southern and Eastern Europe. Also from Scandinavia and the westernmost part of Europe there are few data on air concentrations.

3.1.1 Lead in precipitation

The stations have been located away from local sources and are as far as possible representative for a larger region. The lowest concentrations of Pb during 1999 are found in northern Scandinavia, Iceland, Ireland and Portugal, where the annual averages are below 1 µg Pb/l (Figure 4). Increasing gradients can be seen eastward with peaks around 5–6 µg Pb/l at Czech stations. The main road from Praha to Brno is not far from CZ3 (Košetice). Usage of Pb in petrol (or as petrol additive) has decreased much more in the Western European countries relatively to the Eastern European countries over the last years (Pacyna, MSC/West, pers. comm.).

3.1.2 Cadmium in precipitation

In Scandinavia the annual mean values of Cd are below 0.05 µg Cd/l (Figure 5). An increasing gradient can be seen south. The highest concentrations of Cd are reported from the Belgian and the Czech stations. The high concentrations of cadmium in Belgium are probably due to emissions from Hoboken smelter which produce metals. The emissions of Cd have also decreased in Europe in recent years, but not so much as for Pb.

3.1.3 Lead in aerosols

Figure 6 presents the annual averages of Pb in air in 1999. The lowest concentrations (below 1 ng Pb/m³) can be seen at Svalbard (NO42), Iceland and Greenland. Concentration maximum is seen at the Belgium station. Relatively high concentrations of Pb in aerosols can also be seen at the Slovakian sites, which may be due to industry in the region Ruzomberok – Liptovský Mikuláš (Rühling et al., 1998).

3.1.4 Cadmium in aerosols

Cadmium in aerosols is presented in Figure 7. The lowest concentrations (below 0.10 ng Cd/m³) are reported from Svalbard and Norway. An increasing gradient can be seen southeastward, with the highest concentration maxima at the Belgian and also the Slovak stations. The relatively high concentrations of Cd reported from the Slovakian stations may mainly be due to emissions from copper smelters in the Legnica - Glogów basin in Southern Poland (Rühling et al., 1998).

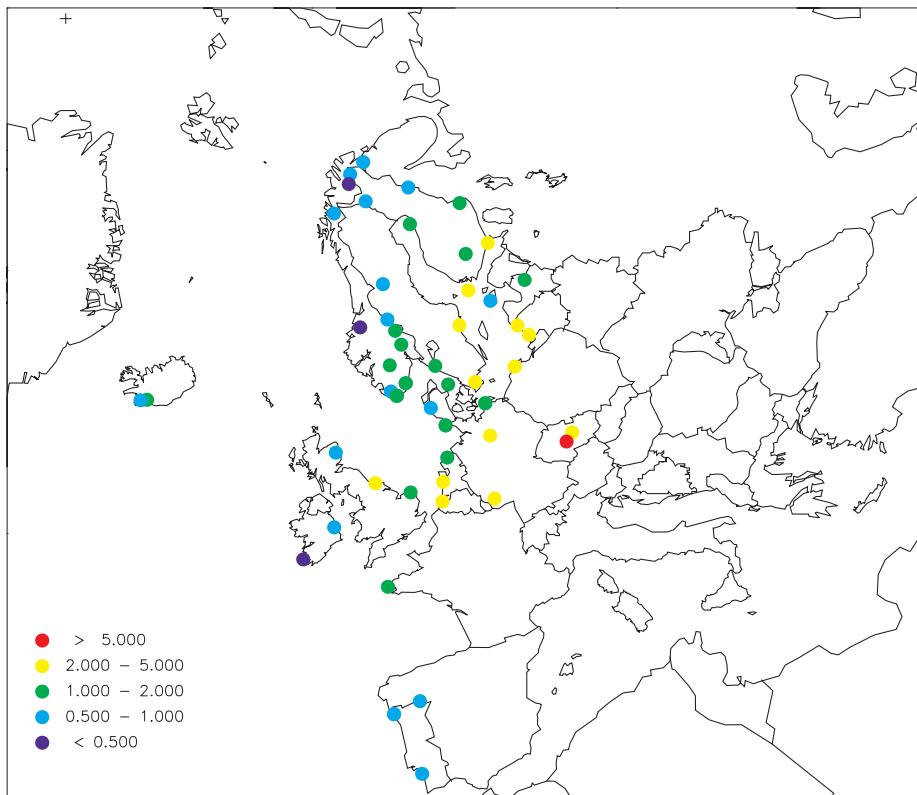

Figure 4: Lead in precipitation, 1999 ($\mu\text{g/l}$).

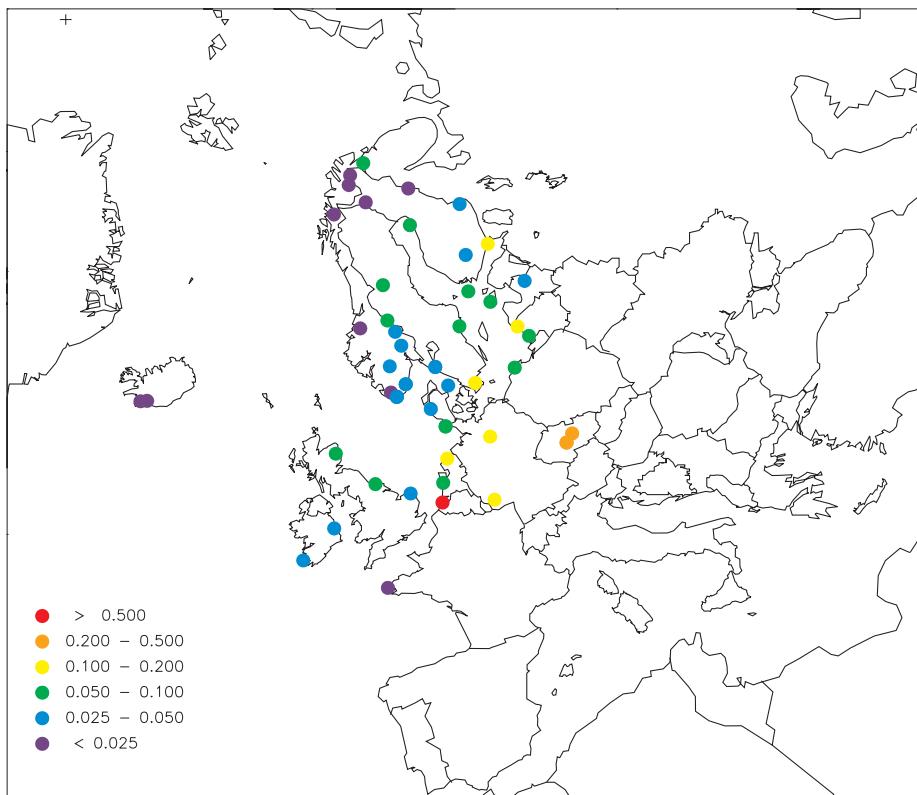

Figure 5: Cadmium in precipitation, 1999 ($\mu\text{g/l}$).

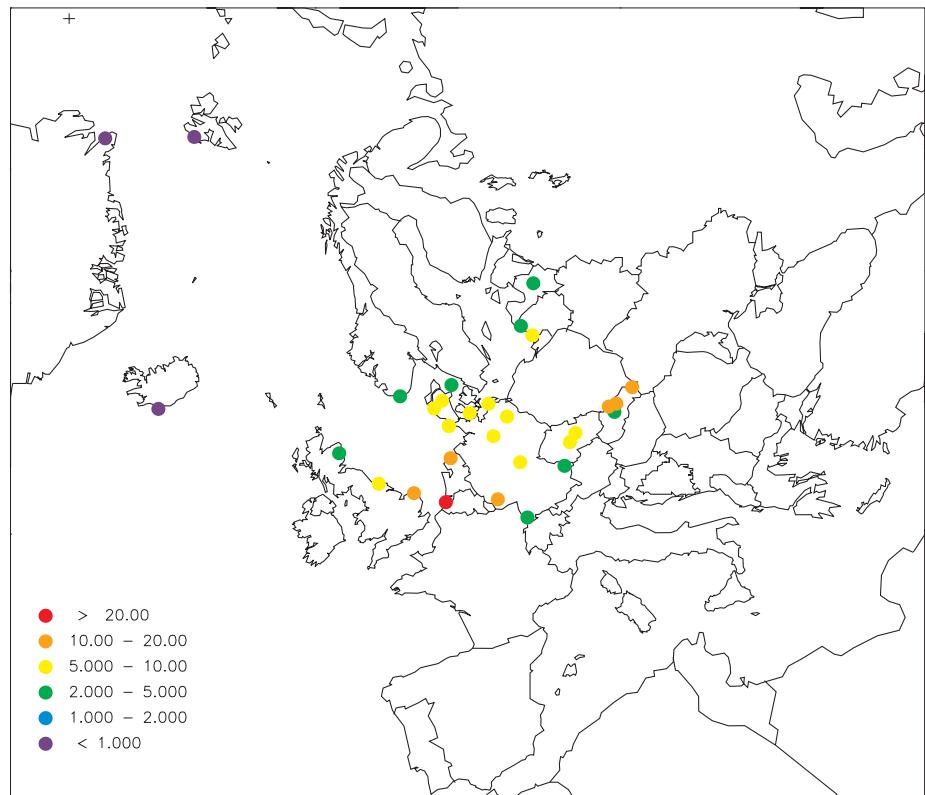

Figure 6: Lead in aerosols, 1999 (ng/m^3).

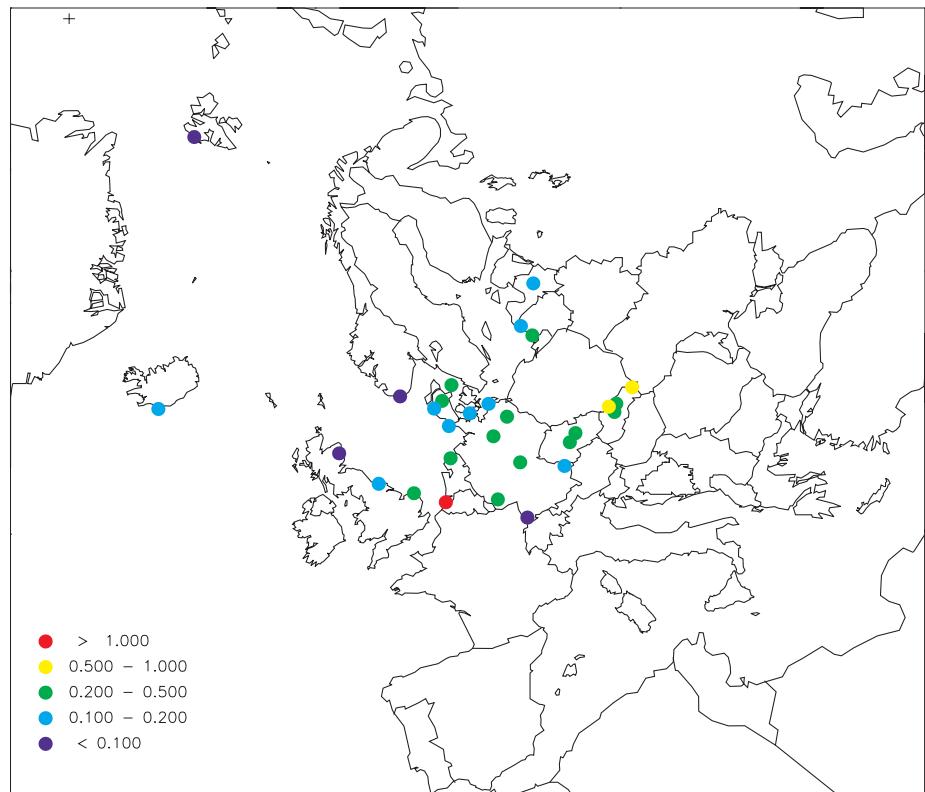

Figure 7: Cadmium in aerosols, 1999 (ng/m^3).

3.2 Temporal trends for lead in aerosols

Figure 8 shows temporal trends for lead in aerosols at 9 stations for which there have been reported data from for at least six years. Several countries in Europe have reduced their emissions of Pb which can be seen in the decreasing level in the Pb concentrations at DE4, DK3 and NL9. For CZ3, GB91, LT15, LV10, NO42 and SK4 no clear trends can be noticed for the relatively short period of monitoring. A marked seasonal variation in the level of Pb can be seen at NO42 with highest concentrations during the high Arctic winter. This is due to the positions of major weather systems: In winter and spring, a high pressure system over Siberia pushes the Arctic front far to the south, so that important polluted areas are within the Arctic air mass.

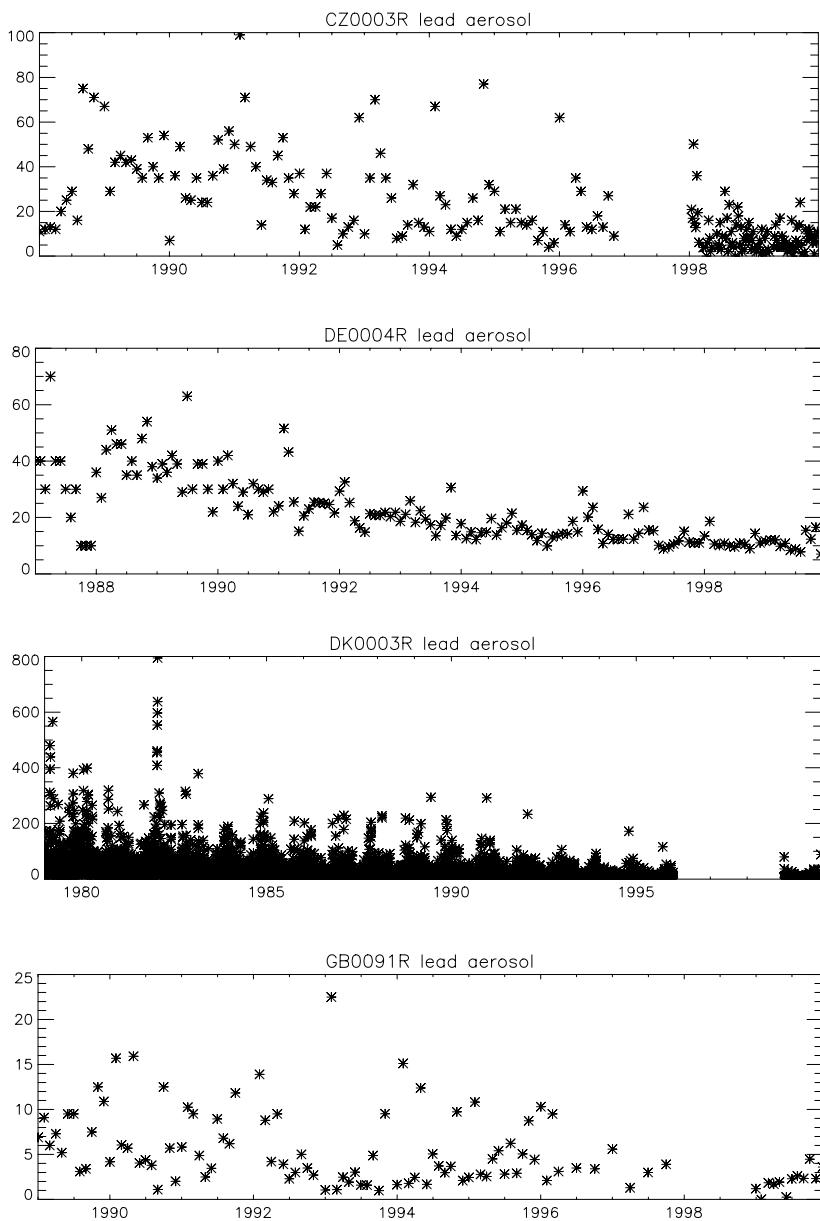

Figure 8: Temporal trends of Pb in aerosols at different EMEP sites.

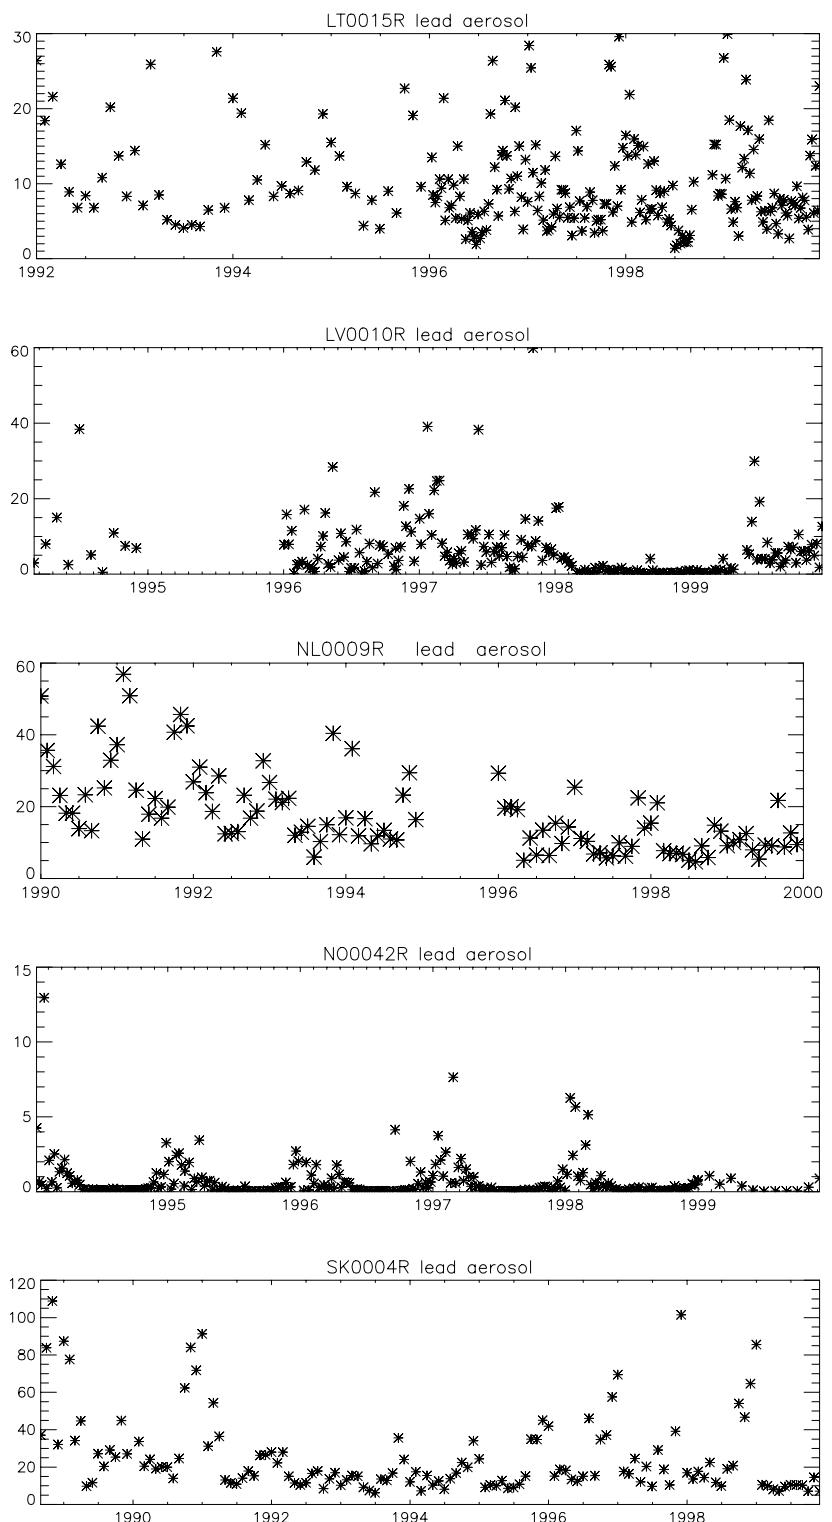

Figure 8, cont.

3.3 Concentrations of HCHs

Figure 9 and Figure 10 show temporal trends for α -HCH and γ -HCH in air at 6 stations. The concentration level of α -HCH at the Norwegian stations is relatively high compared to the other stations, but decreasing. This is probably due to higher input of technical HCH at high latitudes. Almost 80% of the remaining use of α -HCH in Europe in 1996 were assigned to the new states of the former Soviet Union (422 t of technical HCH) (Breivik et al., 1999). The other 20% were attributed to usage in some former eastern European countries (Breivik et al., 1999). Iceland is influenced by westerly airmasses which explain the lower concentrations seen at IS0091R.

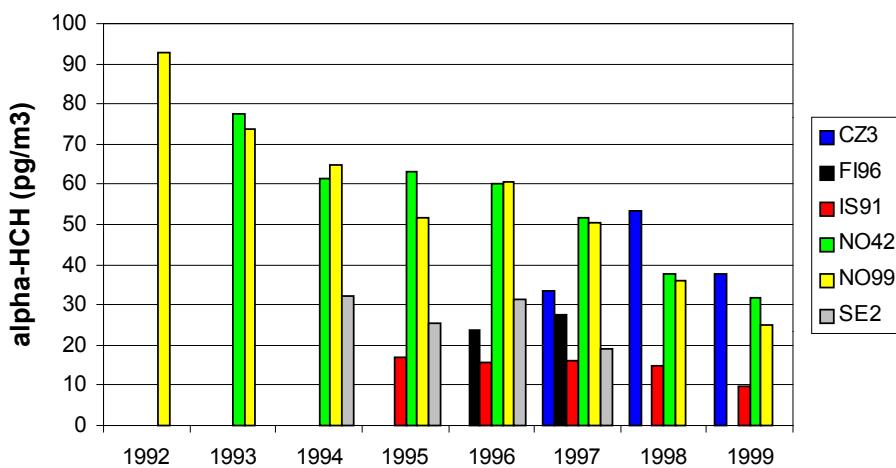

Figure 9: Annual weighted means for alpha-HCH during 1992-1999.

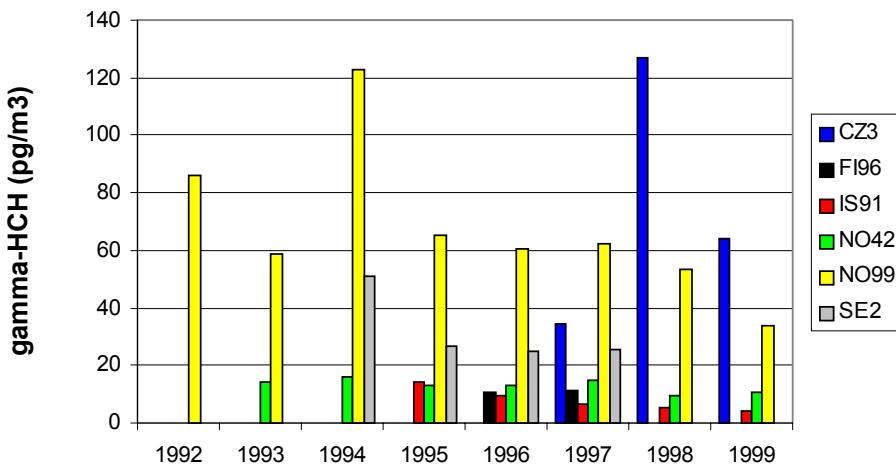

Figure 10: Annual weighted means for gamma-HCH during 1992-1999.

Lista (NO0099R) at the southern coast of Norway, shows high concentrations of γ -HCH in air, which may be due to long range transport from southern parts of Europe. According to Centre International d'Etudes du Lindane (CIEL, 1998), the average annual lindane consumption in Europe was 2130 t during the period from

1992 to 1997. France was the major user of lindane in Europe during this period, with an annual average consumption of 1600 t (CIEL, 1998).

3.4 Concentrations of benzo(a)pyrene

Benzo(a)pyrene (also other PAHs) is rapidly destroyed by UV. In the absence of local sources, therefore, a pronounced seasonal trend is to be expected, which is seen especially for CZ03 (Figure 11).

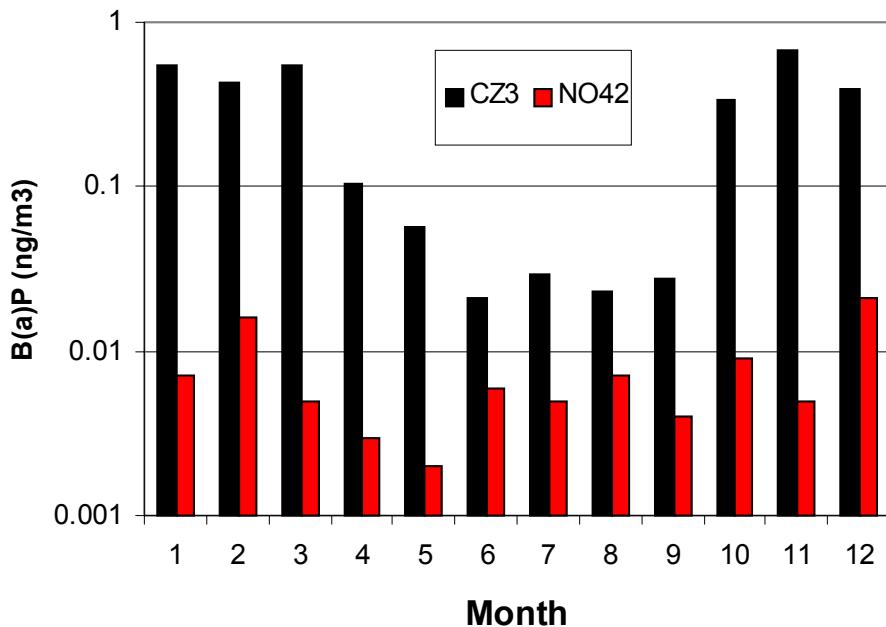

Figure 11: Concentrations of benzo(a)pyrene in air+aerosol at two EMEP-stations, 1999.

3.5 Annual summaries

Annual summaries of heavy metals in precipitation and air are given in Annex 1 and Annex 2, respectively. Annual summaries for POP data are seen in Annex 3 and Annex 4. The precipitation component summaries contain:

- the precipitation weighted arithmetic mean value,
- the minimum and maximum daily concentrations,
- the number of data below the detection limit,
- the number of samples for a specified component
- a flag which gives information about the quality of the data,
- and a sampling flag which gives information about the sampling procedures.

The wet depositions have been obtained by multiplying the weighted mean concentration by the total amount of precipitation in the period. The concentrations for days with missing precipitation data have consequently been assumed to be equal to the weighted average of the period.

For air components the arithmetic mean and the geometric mean have been computed together with their standard deviations. The definitions are given on the next three pages. The geometric standard deviation is a dimensionless factor. As a measure of the completeness of the dataset, the number of samples analysed in the period has been printed.

In the computations of mean values and other statistics, the concentrations below the detection limit have been set equal to one half of the actual limit. An overview of the statistics and definitions is given below.

W.mean \hat{c} is the precipitation weighted arithmetic mean concentration used for precipitation components:

$$\hat{c} = \frac{I}{\sum_i p_i} \cdot \sum_i c_i \cdot p_i$$

where p_i is precipitation amount day i with the measured concentration c_i of a specific component.

Arit mean \bar{c}_a is the arithmetic mean value used for air components only, and N is number of days with data:

$$\bar{c}_a = \frac{I}{N} \sum_i c_i$$

Arit sd sd_a is the arithmetic standard deviation from the arithmetic mean value. It is computed for air components only:

$$sd_a = \sqrt{\frac{\sum_i (c_i - \bar{c}_a)^2}{N - I}}$$

Geom mean \bar{c}_g is the geometric mean value used for air components only, and it is computed from the arithmetic mean of $\ln c$:

$$\bar{\ln c} = \frac{1}{N} \cdot \sum_i \ln c_i$$

$$\bar{c}_g = \exp(\bar{\ln c})$$

Geom sd sd_g is the geometric standard deviation from the geometric mean value. It is computed for air components only, and it is based on the standard deviation of $\ln c$:

$$sdlnc = \left(\frac{\sum_i^l (lnc_i - \overline{lnc})^2}{N - 1} \right)^{\frac{1}{2}}$$

$$sd_g = \exp(sdlnc)$$

Min	is the minimum value reported for a specific component, and it is printed both for precipitation and air components.
50%	is the 50 percentile, defined as above and computed for air data only.
Max	is the maximum value reported for a specific component, and it is given for precipitation and air components.
Dep	is the wet deposition of a specific precipitation component. The deposition is the product of the total precipitation amount measured and the weighted arithmetic mean of a component measured at a site.
Num bel	is the number of data below the detection limit (not used for precipitation amount).
Num samples	is the number of samples for a specific component.
Samp flag	is a two-character code which gives information on the resolution of the reported data. Usually the resolution reported is the same as the sampling period, but not always. The code used in this report is:
H:	hourly
D:	daily
D1:	one-day each week
D2:	two-days each week
W:	weekly
WC:	weekly with change the first day each month
W1:	one-week each month
W2:	two weekly
W4:	four-weekly
M:	monthly
Y:	yearly
QA:	is a flag which gives information on the quality of the data

The units used for the results in this report are given in Table 7.

Table 7: Units used for the measured components.

Components	Units for W. mean, Min Max	Units for depositions
Amount precipitation	mm	mm
Heavy metals in precipitation	$\mu\text{g/l}$	$\mu\text{g}/\text{m}^2$
Mercury in precipitation	ng/l	ng/m^2
Heavy metals in air	ng/m^3	
Mercury in air	ng/m^3	
POPs in precipitation	ng/l	ng/m^2
PAHs in air	ng/m^3	
Pesticides, HCB and PCBs in air	pg/m^3	

3.6 Monthly summaries

Monthly averages of heavy metals are given in Annexes 5-8. The monthly mean values of precipitation data are precipitation weighted arithmetic averages. Average air concentrations are arithmetic averages of the reported values.

Data which do not have monthly resolution, but have parts of the sample in one month and parts in the following have estimated monthly means. The precipitation data have been treated like this: If e.g. a weekly sample has 5 days in one month and 2 days in the next, 5/7 parts of the precipitation will be assigned to the first month and 2/7 parts to the next month, while the concentrations are assumed to be equal. The precipitation weighted monthly averages are then calculated as the estimated monthly deposition divided by the monthly precipitation amount.

For air samples starting and ending in different months weighted averages are calculated in a similar way. All values are multiplied with the number of days within a given month. The average is obtained by dividing the sum of these values with the number of days with measurements in that month.

3.7 Update

The data compiled in this report represent the best data available at present. If any further errors are detected, the data will be corrected in the database. It is important that the users make certain that they have access to the most recent version of the database. For the data presented here the latest alteration is 15 August 2001. Scientific use of the EMEP data should be based on fresh copies of the data. Copies can be requested from the CCC (e-mail: torunn.berg@nilu.no). Information about the EMEP measurement network can be found at CCC's internet pages at <http://www.nilu.no/projects/ccc/index.html>.

4. Conclusions and recommendations

The lowest concentrations of Pb and Cd are generally observed in northern Scandinavia, Greenland, Iceland, and the westernmost part of Europe. Increasing gradients can be seen eastward. Several countries in Europe have reduced their emissions of Pb which can be seen in the decreasing level in the Pb concentrations at several stations. However, no clear trends can be noticed for other stations.

The concentration level of α -HCH and γ -HCH at the Norwegian and the Icelandic stations are decreasing. For the other stations no clear trends can be noticed for the relatively short period of monitoring.

There is a general need for more measurement sites with high quality data. Few stations in central parts of Europe, the Mediterranean region and the most eastern part of Europe have reported data for heavy metals in precipitation. The site density is also low for heavy metals in air in Scandinavia, the Mediterranean region and eastern Europe. Data for POPs have been reported only from countries around the North and Baltic Seas, in the Arctic and from the Czech Republic.

Several countries have still not reported any data to the database. CCC has, however, got access to data from OSPARCOM (Oslo and Paris Conventions for the prevention of marine pollution), so a few of these countries are nevertheless included in the report. CCC will still appreciate receiving old data for the database. These data will be quality checked and transferred to the database in the same way as newer data. It is important that the participants give information on sampling, analytical methods and quality control.

5. Acknowledgements

A large number of anonymous co-workers in participating countries have been involved in this work. A list of participating institutes, which have provided data for 1999, can be seen below. The staff at CCC wishes to express their gratitude and appreciation for continued good co-operation and efforts.

Annex 9

Overview of sampling and analytical methods

This Annex gives an overview of the sampling methods used in the participating countries. The information given is mostly based on answered questionnaires issued by the CCC. Most countries have not reported this information.

Table 9.1: Techniques for sampling of precipitation and aerosols.

Country	Heavy metals in precipitation	Heavy metals in air/air particles	POPs in precipitation	POPs in air
Belgium	Bulk/Wet-only	Filter-1pack		
Czech Republic	Bulk	Filter-1pack		High vol.
Denmark	Bulk	Filter-3pack		
Finland	Bulk		Bulk	High vol.
France				
Germany	DE1,9: Wet-only DE2,4: Bulk	Machery/Nagel MN 85/90 (glassfiber) High Vol	Wet only	
Iceland	IS02: Wet-only IS90: Bulk	High vol.	Bulk (Steel funnel 1m ² /PUR foam)	PUR-foam 1000m ³ /15days
Ireland	Bulk	Hg-monitor	Bulk	
Italy				
Latvia	Bulk			
Lithuania	Bulk	Low vol		
Netherlands				
Norway	Bulk	NO42: 20 l/h Whatman 40 fine fraction Hg: gold traps NO99: 10 l/min Gelman Zefluor teflon filter 2.5 µm / Nucleopore PC-membran 8 µm	Bulk Funnel and bottle of glass	NILU's High Vol. Sampler Gelman AE filter + 2 PUR foams 20m ³ /h NO42: 1000m ³ NO99: 500m ³
Poland	Bulk	2 m ³ /day membrane filters Synpor-4, 0.85		
Portugal	Bulk			

Table 9.1 cont.

Country	Heavy metals in precipitation	Heavy metals in air / air particles	POPs in precipitation	POPs in air
Slovak Republic	1.3.94→ Wet-only (Bulk earlier)	Nitrocellulose filters 45mm, 15-60 m ³ /day (Earlier: Nitrocellulose filters 35mm, 12 m ³ /day)		
Sweden	Bulk	Hg: gold traps	bulk	High vol.
Switzerland		Glassfiber filters		
Turkey				
United Kingdom	Bulk			
Yugoslavia	Bulk			

Annex 10

List of data reports

Data Report October 1977-September 1978.
EMEP/CCC-Report 3/80 by J. Schaug, H. Dovland, J.E. Skjelmoen.
Lillestrøm, Norwegian Institute for Air Research, 1980.

Data Report October 1978-September 1979.
EMEP/CCC-Report 4/81 by J.E. Skjelmoen, H. Dovland, J. Schaug.
Lillestrøm, Norwegian Institute for Air Research, 1981.

Data Report October 1979-September 1980.
EMEP/CCC-Report 5/84 by J.E. Skjelmoen, J. Schaug. Lillestrøm, Norwegian
Institute for Air Research, 1984.

Data Report October 1980-September 1981.
EMEP/CCC-Report 6/84 by J.E. Skjelmoen, J. Schaug.
Lillestrøm, Norwegian Institute for Air Research, 1984.

Data Report October 1981-September 1982.
EMEP/CCC-Report 2/85 by K. Nodop, J.E. Skjelmoen, J. Schaug.
Lillestrøm, Norwegian Institute for Air Research, 1985.

Data Report October 1982-December 1982.
EMEP/CCC-Report 4/86 by J. Schaug, A. Harstad, T. Krognes, J.E. Skjelmoen.
Lillestrøm, Norwegian Institute for Air Research, 1986.

Data Report January 1983-December 1983.
EMEP/CCC-Report 5/86 by J. Schaug, A. Harstad, T. Krognes,
J.E. Skjelmoen.
Lillestrøm, Norwegian Institute for Air Research, 1986.

Data Report January 1984-June 1984
EMEP/CCC-Report 1/87 by J. Schaug, J. Pacyna, A. Harstad, T. Krognes, J.E.
Skjelmoen.
Lillestrøm, Norwegian Institute for Air Research, 1987.

Data Report July 1984-December 1984
EMEP/CCC-Report 2/87 by J. Schaug, J. Pacyna, A. Harstad, T. Krognes, J.E.
Skjelmoen.
Lillestrøm, Norwegian Institute for Air Research, 1987.

Data Report January 1985-June 1985
EMEP/CCC-Report 5/87 by J. Pacyna, J. Schaug, A. Harstad, T. Krognes, J.E.
Skjelmoen.
Lillestrøm, Norwegian Institute for Air Research, 1987.

Data Report July 1985-December 1985
EMEP/CCC-Report 6/87 by J. Pacyna, J. Schaug, A. Harstad, T. Krognes, J.E.
Skjelmoen.
Lillestrøm, Norwegian Institute for Air Research, 1987.

Ozone measurements January-December 1985
EMEP/CCC-Report 3/89 by U. Feister, U. Pedersen.
Potsdam/Lillestrøm, Meteorological Service of the GDR/Norwegian Institute for Air Research, 1989.

European Precipitation Chemistry Atlas.
An Atlas of monthly and seasonal maps of precipitation amount, non-marine sulphate, nitrate, ammonium and hydrogen ion concentrations and depositions based on the EMEP precipitation network: October 1977 to September 1982.
EMEP/CCC-Report 5/88 by R.J. Barthelmie, T.D. Davies, G. Farmer, J. Schaug.
Norwich/Lillestrøm, Climatic Research Unit, University of East Anglia/
Norwegian Institute for Air Research, 1988.

Data Report 1986. Part 1: Annual summaries.
EMEP/CCC-Report 6/88 by J. Schaug, J.E. Skjelmoen, S.E. Walker, A. Harstad, K. Nodop, J. Pacyna
Lillestrøm, Norwegian Institute for Air Research, 1988.

Data Report 1986. Part 2: Monthly and seasonal summaries.
EMEP/CCC-Report 7/88 by J. Schaug, J.E. Skjelmoen, S.E. Walker, A. Harstad, K. Nodop, J. Pacyna
Lillestrøm, Norwegian Institute for Air Research, 1988.

Ozone measurements January-December 1986.
EMEP/CCC-Report 8/90 by U. Feister, U. Pedersen, E. Schulz, S. Hechler.
Potsdam/Lillestrøm, Meteorological Service of the GDR/Norwegian Institute for Air Research, 1990.

Data Report 1987. Part 1: Annual summaries.
EMEP/CCC-report 1/89 by J. Schaug, J.E. Skjelmoen, S.-E. Walker, U. Pedersen, A. Harstad
Lillestrøm, Norwegian Institute for Air Research, 1989.

Data Report 1987. Part 2: Monthly and seasonal summaries. EMEP/CCC-Report 2/89 by J. Schaug, J.E. Skjelmoen, S.E. Walker, U. Pedersen, A. Harstad
Lillestrøm, Norwegian Institute for Air Research, 1989.

Data Report 1988. Part 1: Annual summaries.
EMEP/CCC-Report 4/90 by U. Pedersen, J. Schaug, J.E. Skjelmoen, J.E. Hanssen.
Lillestrøm, Norwegian Institute for Air Research, 1990.

European Precipitation Chemistry Atlas (Volume 2).
 An Atlas of monthly and seasonal maps of precipitation amount, non-marine sulphate, nitrate, ammonium and hydrogen ion concentrations and depositions based on the EMEP precipitation network: October 1982 to December 1985.
 EMEP/CCC-Report 6/90 by T.D. Davies, R.J. Barthelmie, M. Varley, S. Dorling, G. Farmer, J. Schaug.

Norwich/Lillestrøm, Climatic Research Unit, University of East Anglia/
 Norwegian Institute for Air Research, 1990.

Data Report 1988. Part 2: Monthly and seasonal summaries.
 EMEP/CCC-Report 5/90 by J. Schaug, U. Pedersen, J.E. Skjelmoen, J.E. Hanssen.
 Lillestrøm, Norwegian Institute for Air Research, 1990.

Data Report 1989. Part 1: Annual summaries.
 EMEP/CCC-Report 2/91 by J. Schaug, U. Pedersen, J.E. Skjelmoen.
 Lillestrøm, Norwegian Institute for Air Research, 1991.

Data Report 1989. Part 2: Monthly and seasonal summaries.
 EMEP/CCC-Report 3/91 by J. Schaug, U. Pedersen, J.E. Skjelmoen. Lillestrøm, Norwegian Institute for Air Research, 1991.

Ozone Data Report 1988.
 EMEP/CCC-Report 1/92 by U. Pedersen.
 Lillestrøm, Norwegian Institute for Air Research, 1992.

Data Report 1990. Part 1: Annual summaries.
 EMEP/CCC-Report 2/92 by U. Pedersen, J. Schaug, J.E. Skjelmoen.
 Lillestrøm, Norwegian Institute for Air Research, 1992.

Data Report 1990. Part 2: Monthly and Seasonal Summaries.
 EMEP/CCC-Report 3/92 by J. Schaug, U. Pedersen, J.E. Skjelmoen and I. Kvalvågnes.
 Lillestrøm, Norwegian Institute for Air Research, 1992.

European Precipitation Chemistry Atlas (Volume 3). An Atlas of monthly and seasonal maps of precipitation amount, non-sea-salt sulphate, nitrate, ammonium and hydrogen ion concentrations and depositions based on the EMEP precipitation chemistry network: January 1986 to December 1989.
 EMEP/CCC-Report 6/92 by T.D. Davies, S. Glynn, R.J. Barthelmie.
 Norwich/Lillestrøm, Climate Research Unit, University of East Anglia,
 Norwegian Institute for Air Research, 1992.

Ozone Data Report 1989.
 EMEP/CCC-Report 2/93 by U. Pedersen and I. Kvalvågnes.
 Lillestrøm, Norwegian Institute for Air Research, 1993.

Data Report 1991. Part 1: Annual summaries.
EMEP/CCC-Report 4/93 by J. Schaug, U. Pedersen, J.E. Skjelmoen and
I. Kvalvågnes.
Lillestrøm, Norwegian Institute for Air Research, 1993.

Data Report 1991. Part 2: Monthly and seasonal summaries.
EMEP/CCC-Report 5/93 by J. Schaug, U. Pedersen, J.E. Skjelmoen and
I. Kvalvågnes.
Lillestrøm, Norwegian Institute for Air Research, 1993.

Data Report 1992. Part 1: Annual summaries.
EMEP/CCC-Report 4/94 by J. Schaug, U. Pedersen, J.E. Skjelmoen, K. Arnesen,
A. Bartonova.
Lillestrøm, Norwegian Institute for Air Research, 1992.

Data Report 1992. Part 2: Monthly and seasonal summaries.
EMEP/CCC-Report 5/94 by J. Schaug, U. Pedersen, J.E. Skjelmoen and
K. Arnesen.
Lillestrøm, Norwegian Institute for Air Research, 1993.

VOC measurements August 1992-June 1993.
EMEP/CCC-Report 6/93 by S. Solberg, N. Schmidbauer, C. Dye, U. Pedersen and
J. Schaug.
Lillestrøm, Norwegian Institute for Air Research, 1993.

VOC measurements 1993.
EMEP/CCC-Report 3/94 by S. Solberg, C. Dye and N. Schmidbauer.
Lillestrøm, Norwegian Institute for Air Research, 1994.

Ozone Measurements 1990-1992.
EMEP/CCC-Report 4/95 by A.-G. Hjellbrekke.
Kjeller, Norwegian Institute for Air Research, 1995.

Data Report 1993. Part 1: Annual summaries.
EMEP/CCC-Report 7/95 by A.-G. Hjellbrekke, G. Lövblad, K. Sjöberg,
J. Schaug, J.E. Skjelmoen.
Kjeller, Norwegian Institute for Air Research, 1995.

Data Report 1993. Part 2: Monthly and seasonal summaries.
EMEP/CCC-Report 8/95 by G. Lövblad, A.-G. Hjellbrekke, K. Sjöberg,
J. Schaug, J.E. Skjelmoen.
Kjeller, Norwegian Institute for Air Research, 1995.

Ozone Measurements 1993-1994.
EMEP/CCC-Report 1/96 by A.G. Hjellbrekke.
Kjeller, Norwegian Institute for Air Research, 1996.

Data Report 1994. Part 1: Annual summaries.
 EMEP/CCC-Report 4/96 by A.-G. Hjellbrekke, J. Schaug, J.E. Skjelmoen.
 Kjeller, Norwegian Institute for Air Research, 1996.

Data Report 1994. Part 2: Monthly and seasonal summaries.
 EMEP/CCC-Report 5/96 by A.-G. Hjellbrekke, J. Schaug, J.E. Skjelmoen.
 Kjeller, Norwegian Institute for Air Research, 1996.

VOC measurements 1994–1995.
 EMEP/CCC-Report 6/96 by S. Solberg, C. Dye and N. Schmidbauer.
 Lillestrøm, Norwegian Institute for Air Research, 1996.

Heavy metals and POPs within the ECE region.
 EMEP/CCC-Report 8/96 by T. Berg, A.-G. Hjellbrekke, J.E. Skjelmoen.
 Kjeller, Norwegian Institute for Air Research, 1996.

Ozone Measurements 1995.
 EMEP/CCC-Report 3/97 by A.-G. Hjellbrekke.
 Kjeller, Norwegian Institute for Air Research, 1997.

Data Report 1995. Part 1: Annual summaries.
 EMEP/CCC-Report 4/97 by A.-G. Hjellbrekke, J. Schaug, J.E. Hanssen,
 J.E. Skjelmoen.
 Kjeller, Norwegian Institute for Air Research, 1997.

Data Report 1995. Part 2: Monthly and seasonal summaries.
 EMEP/CCC-Report 5/97 by A.-G. Hjellbrekke, J. Schaug, J.E. Hanssen,
 J.E. Skjelmoen.
 Kjeller, Norwegian Institute for Air Research, 1997.

VOC measurements 1996.
 EMEP/CCC-Report 7/97 by S. Solberg, C. Dye and N. Schmidbauer.
 Lillestrøm, Norwegian Institute for Air Research, 1997.

Heavy metals and POPs within the ECE region. Additional data.
